

ANCHORAGE MAKERSPACE

Website Photography Shot List

Purpose

This document provides a complete shot list for photographing the Anchorage Makerspace for the redesigned website. Nine equipment areas each have their own card with required shots, location notes, and photographer tips. Completed photos will replace the placeholder images on the new site.

General Photography Tips

Equipment - Any modern smartphone (iPhone 13+ or Pixel 7+ ideal) - Camera app set to highest resolution - A second phone as a fill light if needed - No tripod necessary — handheld is fine	Best Time to Shoot - Monday Open House 6–8pm (most activity) - Coordinate with members in advance - Aim for 3–5 good shots per area - Get written permission from anyone pictured
Composition - Landscape (horizontal) orientation preferred - Leave some space at edges (for cropping flexibility) - Action beats static — catch people mid-work - Shoot at least 5 frames per shot — pick the best	File Delivery - Share via Google Drive or Dropbox folder - Full resolution originals (do not compress) - Name files by area: woodshop_01.jpg, laser_02.jpg - Target: at least 4 approved shots per area

Shot Cards — One Per Area

#1	WOODSHOP
Location: Woodworking area — table saw, band saw, router table	
Goal: Show a vibrant, active workspace that makes woodworking feel approachable and exciting	
SHOTS NEEDED	
1.	Wide angle of the full woodshop area — show the scale and range of equipment
2.	Someone actively using the table saw — sawdust flying, safety gear on
3.	Close-up of hands shaping or sanding a finished piece
4.	Finished project resting on the workbench — shows what members make
PHOTOGRAPHER TIPS	
→ Monday Open House evenings (6–8pm) are ideal — the space will be active → Ask members to wear safety glasses for all equipment shots → Natural action shots beat posed ones — let people work and shoot candidly → Sawdust in the air and shavings on the bench add great texture and authenticity	

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#2 3D PRINTING

Location: 3D printer bank and adjacent design workstations

Goal: Capture the magic of a print in progress — something being created out of nothing

SHOTS NEEDED

1. Wide shot of multiple printers running simultaneously
2. Extreme close-up of a print nozzle mid-print with the filament visible
3. Member examining or holding a freshly completed print
4. Side-by-side of a digital design on screen and the physical printed result

PHOTOGRAPHER TIPS

- Start a print before the session so something is mid-progress when you shoot
- Use a phone flashlight held to the side to illuminate fine print layers dramatically
- Colorful filament spools in the background add visual interest
- Macro mode on most modern phones works great for extreme close-ups

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#3 LASER CUTTER

Location: Professional CO₂ laser cutter station

Goal: The laser beam mid-cut is one of the most visually striking shots — prioritize this one

SHOTS NEEDED

1. Laser beam cutting through material — glowing light and slight smoke visible
2. Finished piece being lifted from the cutting bed (the 'reveal' moment)
3. Intricate laser-cut design detail — show the precision possible
4. Member setting up a design on the control computer

PHOTOGRAPHER TIPS

- Dim the room lights slightly so the laser beam glows more dramatically
- Shoot through the viewing window for safety — the glow comes through beautifully
- Acrylic and wood both photograph well; avoid metal for photogenic results
- The smoke haze adds atmosphere — do not ventilate before shooting

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#4 CNC ROUTER

Location: Large-bed CNC router station

Goal: Convey precision and capability — this is serious professional equipment

SHOTS NEEDED	
1.	Wide shot of the full CNC bed with a piece being routed
2.	Close-up of the router bit cutting into material — chips flying
3.	Member inspecting a freshly routed piece, showing satisfaction
4.	Finished CNC-cut panel or sign — ideally something complex and impressive
PHOTOGRAPHER TIPS	
→ Set up an interesting piece before shooting — simple rectangles don't impress → Overhead angle (shoot straight down at the bed) shows the precision of the cuts → Wood chips and dust around the machine signal authentic use → Include the control panel/screen in background to show the high-tech side	
Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved	

#5	WELDING
Location: Metal work and welding area	
Goal: Sparks and glow — this is the most dramatic shot in the entire set	
SHOTS NEEDED	
1.	Welding arc in action with sparks flying — the hero shot
2.	Welder's gloved hands guiding the torch along a seam
3.	Before/after: raw metal parts laid out, then the welded finished piece
4.	Wide shot of the welding bay showing the full setup and safety equipment
PHOTOGRAPHER TIPS	
→ Use a fast shutter speed (1/500s or faster) to freeze individual sparks mid-air → Shoot slightly darkened room so the arc glow is the dominant light source → The photographer must wear appropriate eye protection — use a welding shade → Coordinate with a member welder ahead of time — do not attempt without one	
Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved	

#6	TEXTILES & SEWING
Location: Sewing machines, sergers, and fabric work tables	
Goal: Show this as a creative maker space, not a home sewing room — colorful and energetic	
SHOTS NEEDED	
1.	Member working at a sewing machine with colorful fabric
2.	Overhead flat-lay of fabric swatches, thread spools, and tools arranged artfully
3.	Close-up of needle and fabric mid-stitch
4.	Finished sewn project displayed — garment, bag, or textile art piece
PHOTOGRAPHER TIPS	

- Colorful fabrics and thread make for naturally vibrant photos — lean into it
- Overhead (flat-lay) shots work especially well for this area
- Natural window light, if available, is ideal for fabric shots
- Show a variety — garments, bags, and artistic textiles all appeal to different visitors

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#7 ELECTRONICS & ROBOTICS

Location: Electronics bench, soldering station, robotics components

Goal: Convey the tinkerer spirit — curious minds building the future

SHOTS NEEDED

1. Member soldering a circuit board — iron tip glowing, smoke wisp visible
2. Completed robot or electronics project in motion or lit up
3. Organized bench with components, breadboards, wires — controlled chaos
4. Close-up of circuit board traces or LED display in action

PHOTOGRAPHER TIPS

- LEDs and screens photograph beautifully in slightly dimmed lighting
- Soldering irons glow orange at the tip — shoot close for dramatic effect
- If a robot is available, get it moving or lit up for the shot
- Show the variety: Arduino, Raspberry Pi, wiring, and finished projects together

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#8 LARGE FORMAT PRINTING

Location: Wide-format printer and vinyl cutting station

Goal: Show impressive scale — output that surprises people with its size and quality

SHOTS NEEDED

1. Wide-format print rolling off the printer — show the full sheet length
2. Member holding or unrolling a large finished print
3. Close-up of print detail — show the resolution and color vibrancy
4. Vinyl cutter in action with the cut material peeling away

PHOTOGRAPHER TIPS

- Include a person in the frame to convey the impressive scale of large prints
- Colorful, graphic prints photograph much better than text-heavy output
- The print coming off the roll mid-print is a great action moment
- Good overhead lighting is key here — avoid shadows across the print surface

Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#9	OPEN STUDIO / COMMUNITY SPACE
Location: Main open floor, event tables, and common areas	
Goal: Sell the community — show that this is a place where people connect and collaborate	
SHOTS NEEDED	
1.	Wide shot of Monday Open House with multiple members active throughout the space
2.	Small group gathered around a project, collaborating and talking
3.	New visitor being welcomed and shown around by a member
4.	Overview from above (if possible) showing the full buzzing space
PHOTOGRAPHER TIPS	
→ Monday Open House (6–8pm) is the absolute best time to shoot this area → Candid over posed — let conversations and work happen naturally, then shoot → Diversity in the frame matters: different ages, backgrounds, and project types → Warm overhead lighting creates an inviting, welcoming atmosphere in photos	
Status: ☐ Not started ☐ In progress ☐ Photos taken ☐ Approved
