

ANCHORAGE MAKERSPACE

Website Photography — Master Shot List

Combined Reference: Placeholder Filenames · Shot Cards · Field Workflow
anchoramakerspace.com · 1406 W 33rd Ave Unit F, Anchorage AK · Open House: Mondays 6–8pm

Purpose

This is the master reference for the AMS website photography project. It combines two sources into one document:

- The filename/placeholder table — maps each web image slot to its exact filename and framing requirements.
- The detailed shot cards — one per equipment area, with location, goal, required shots, and photographer tips.

Use the filename table when preparing the website. Use the shot cards on shoot day.

General Photography Guidelines

Equipment

- Any modern smartphone (iPhone 13+ or Pixel 7+ ideal) or DSLR/mirrorless
- Shoot RAW if your camera supports it — gives the editor more flexibility. JPEG Large/Fine is fine if not.
- Camera app set to highest resolution
- A second phone as a fill light if needed — no tripod necessary

Best Time to Shoot

- Monday Open House 6–8pm — most activity, most community energy
- Coordinate with members in advance for action shots
- Aim for at least 4–5 good shots per area; pick the best
- Get written permission from anyone pictured

Composition

- Landscape (horizontal) orientation preferred for shop cards — 4:3 ratio
- Hero strip slots (home page): portrait/vertical preferred — 3:4 ratio
- Shoot wide AND tight for every subject — gives the editor options
- Action beats static — catch people mid-work; candid over posed
- Leave space at edges for cropping flexibility

File Handling

- Keep original camera filenames — do not rename files before handoff
- Share via Google Drive or Dropbox — full resolution originals, do not compress
- Final web-ready filenames (image-01.jpg, image-02.jpg, etc.) are assigned by the editor after selection
- Compress to under 300 KB using Squoosh.app before web upload

Section 1 — Home Page Hero Strip (index.html)

Three stacked images on the right side of the home page hero. Vertical/portrait orientation preferred — each slot is tall and narrow. Shoot landscape and crop, or shoot portrait. 3:4 ratio ideal.

Filename	Subject	Location	Wide Shot	Tight Shot	Notes
image-01.jpg	Woodshop	index.html — Hero strip, top	Wide view: table saw center-frame, tools on pegboard	Tighten on blade or miter fence detail	Shoot from doorway height; let shop depth show
image-02.jpg	Laser Cutter	index.html — Hero strip, middle	Laser cutter lid open showing bed; ideally mid-cut (smoke/glow)	Close-up of cut pattern on material on the bed	If shooting mid-cut, use 1/125 s
image-03.jpg	3D Printing	index.html — Hero strip, bottom	Row of CR-10 MAX printers running, spools visible	Single printer nozzle and first layers of a print	Shoot when at least two printers are actively printing

Section 2 — Shop Page Cards (shop.html)

Nine shop area cards, each showing at 4:3 landscape ratio. Shoot wide first, tight second. If a maker is present and willing, include them — action beats empty equipment.

Filename	Subject	Card	Wide Shot	Tight Shot	Notes
image-04.jpg	Woodshop	shop.html — Woodshop	Wide: table saw, miter saw, and router table all in frame	Table saw blade and fence from operator position	Clean sawdust off surfaces before shooting
image-05.jpg	3D Printing	shop.html — 3D Printing	All CR-10 MAX printers in a line, all running if possible	Prusa i3 MK3 nozzle, fresh print, filament spool in background	Morning light is good
image-06.jpg	Laser Cutter	shop.html — Laser Cutter	100W laser cutter full machine, lid closed, control panel lit	Finished cut piece on bed with material still in place	Green indicator lights photograph well against dark interior
image-07.jpg	CNC Router	shop.html — CNC Router	7' x 14' MultiCam CNC — full bed visible from one end	Spindle/bit close-up or finished routed panel on bed	Largest machine; shoot from elevated angle if possible
image-08.jpg	Welding	shop.html — Welding	Welding area: machine, helmet,	MIG torch tip and wire detail against	No active arc —

Filename	Subject	Card	Wide Shot	Tight Shot	Notes
			gloves, workpiece on table	dark background	safety first; sparks on table are fine
image-09.jpg	Textiles & Sewing	shop.html — Textiles	Sewing machines lined up, fabric and notions on table	Machine foot and needle close-up mid-stitch	Colorful fabric makes these photos pop — choose wisely
image-10.jpg	Electronics & Robotics	shop.html — Electronics	Bench: oscilloscope, soldering station, components, Arduino boards	Soldering iron tip and solder joint on a PCB	Turn on the oscilloscope — waveform display reads well
image-11.jpg	Large Format Print	shop.html — Large Format	Wide-format printer in operation or vinyl cutter mid-cut	Freshly cut vinyl lettering on backing sheet	Capture output coming out of the machine if possible
image-12.jpg	Open Studio	shop.html — Open Studio	WIDE — full event space showing tables, open floor, community feel	Corner detail: maker at a table working on a project	Ideal: Monday Open House with 4-6 people visible

Section 3 — Future / Reserved Slots

Reserved for pages not yet fully built. Continue numbering from image-16.jpg for any additional placeholders added later.

Filename	Subject	Page	Wide Shot	Tight Shot	Notes
image-13.jpg	Blog / Events	blog.html or events.html	Workshop in progress — instructor at front, participants at benches	—	Capture a real class or event if scheduling allows
image-14.jpg	Blog / Events	blog.html or events.html	Finished project held up by maker — proud moment	—	Great for blog post headers
image-15.jpg	Visit / Exterior	visit.html	Exterior of 1406 W 33rd Ave Unit F — building entrance, signage	AMS sign or door detail	Shoot on an overcast day for even light on the facade

Shot Cards — One Per Area

The following cards are the on-site reference for each equipment area. Each card includes location, goal, required shots, and photographer tips. Print or keep on your phone while shooting.

#1 WOODSHOP	
LOCATION	Woodworking area — table saw, band saw, router table
GOAL	Show a vibrant, active workspace that makes woodworking feel approachable and exciting
SHOTS NEEDED	1. Wide angle of the full woodshop area — show the scale and range of equipment 2. Someone actively using the table saw — sawdust flying, safety gear on 3. Close-up of hands shaping or sanding a finished piece 4. Finished project resting on the workbench — shows what members make
TIPS	→ Monday Open House evenings (6–8pm) are ideal — the space will be active → Ask members to wear safety glasses for all equipment shots → Natural action shots beat posed ones — let people work and shoot candidly → Sawdust in the air and shavings on the bench add great texture and authenticity
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#2 3D PRINTING	
LOCATION	3D printer bank and adjacent design workstations
GOAL	Capture the magic of a print in progress — something being created out of nothing
SHOTS NEEDED	1. Wide shot of multiple printers running simultaneously 2. Extreme close-up of a print nozzle mid-print with the filament visible 3. Member examining or holding a freshly completed print 4. Side-by-side of a digital design on screen and the physical printed result
TIPS	→ Start a print before the session so something is mid-progress when you shoot → Use a phone flashlight held to the side to illuminate fine print layers dramatically → Colorful filament spools in the background add visual interest → Macro mode on most modern phones works great for extreme close-ups
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#3 LASER CUTTER	
LOCATION	Professional CO ₂ laser cutter station
GOAL	The laser beam mid-cut is one of the most visually striking shots — prioritize this one
SHOTS	1. Laser beam cutting through material — glowing light and slight smoke visible

NEEDED	2. Finished piece being lifted from the cutting bed (the 'reveal' moment) 3. Intricate laser-cut design detail — show the precision possible 4. Member setting up a design on the control computer
TIPS	→ <i>Dim the room lights slightly so the laser beam glows more dramatically</i> → <i>Shoot through the viewing window for safety — the glow comes through beautifully</i> → <i>Acrylic and wood both photograph well; avoid metal for photogenic results</i> → <i>The smoke haze adds atmosphere — do not ventilate before shooting</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#4 CNC ROUTER

LOCATION	Large-bed CNC router station — 7' x 14' MultiCam
GOAL	Convey precision and capability — this is serious professional equipment
SHOTS NEEDED	1. Wide shot of the full CNC bed with a piece being routed 2. Close-up of the router bit cutting into material — chips flying 3. Member inspecting a freshly routed piece, showing satisfaction 4. Finished CNC-cut panel or sign — ideally something complex and impressive
TIPS	→ <i>Set up an interesting piece before shooting — simple rectangles don't impress</i> → <i>Overhead angle (shoot straight down at the bed) shows the precision of the cuts</i> → <i>Wood chips and dust around the machine signal authentic use</i> → <i>Include the control panel/screen in background to show the high-tech side</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#5 WELDING

LOCATION	Metal work and welding area
GOAL	Sparks and glow — this is the most dramatic shot in the entire set
SHOTS NEEDED	1. Welding arc in action with sparks flying — the hero shot 2. Welder's gloved hands guiding the torch along a seam 3. Before/after: raw metal parts laid out, then the welded finished piece 4. Wide shot of the welding bay showing the full setup and safety equipment
TIPS	→ <i>Use a fast shutter speed (1/500s or faster) to freeze individual sparks mid-air</i> → <i>Shoot in a slightly darkened room so the arc glow is the dominant light source</i> → <i>The photographer must wear appropriate eye protection — use a welding shade</i> → <i>Coordinate with a member welder ahead of time — do not attempt without one</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#6 TEXTILES & SEWING

LOCATION	Sewing machines, sergers, and fabric work tables
GOAL	Show this as a creative maker space, not a home sewing room — colorful and energetic
SHOTS NEEDED	1. Member working at a sewing machine with colorful fabric 2. Overhead flat-lay of fabric swatches, thread spools, and tools arranged artfully 3. Close-up of needle and fabric mid-stitch 4. Finished sewn project displayed — garment, bag, or textile art piece
TIPS	→ <i>Colorful fabrics and thread make for naturally vibrant photos — lean into it</i> → <i>Overhead (flat-lay) shots work especially well for this area</i> → <i>Natural window light, if available, is ideal for fabric shots</i> → <i>Show a variety — garments, bags, and artistic textiles all appeal to different visitors</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#7 ELECTRONICS & ROBOTICS

LOCATION	Electronics bench, soldering station, robotics components
GOAL	Convey the tinkerer spirit — curious minds building the future
SHOTS NEEDED	1. Member soldering a circuit board — iron tip glowing, smoke wisp visible 2. Completed robot or electronics project in motion or lit up 3. Organized bench with components, breadboards, wires — controlled chaos 4. Close-up of circuit board traces or LED display in action
TIPS	→ <i>LEDs and screens photograph beautifully in slightly dimmed lighting</i> → <i>Soldering irons glow orange at the tip — shoot close for dramatic effect</i> → <i>If a robot is available, get it moving or lit up for the shot</i> → <i>Show the variety: Arduino, Raspberry Pi, wiring, and finished projects together</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

#8 LARGE FORMAT PRINTING

LOCATION	Wide-format printer and vinyl cutting station
GOAL	Show impressive scale — output that surprises people with its size and quality
SHOTS NEEDED	1. Wide-format print rolling off the printer — show the full sheet length 2. Member holding or unrolling a large finished print 3. Close-up of print detail — show the resolution and color vibrancy 4. Vinyl cutter in action with the cut material peeling away
TIPS	→ <i>Include a person in the frame to convey the impressive scale of large prints</i> → <i>Colorful, graphic prints photograph much better than text-heavy output</i> → <i>The print coming off the roll mid-print is a great action moment</i> → <i>Good overhead lighting is key here — avoid shadows across the print surface</i>

STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved
---------------	---

#9 OPEN STUDIO / COMMUNITY SPACE	
LOCATION	Main open floor, event tables, and common areas
GOAL	Sell the community — show that this is a place where people connect and collaborate
SHOTS NEEDED	1. Wide shot of Monday Open House with multiple members active throughout the space 2. Small group gathered around a project, collaborating and talking 3. New visitor being welcomed and shown around by a member 4. Overview from above (if possible) showing the full buzzing space
TIPS	→ <i>Monday Open House (6–8pm) is the absolute best time to shoot this area</i> → <i>Candid over posed — let conversations and work happen naturally, then shoot</i> → <i>Diversity in the frame matters: different ages, backgrounds, and project types</i> → <i>Warm overhead lighting creates an inviting, welcoming atmosphere in photos</i>
STATUS	☐ Not started ☐ In progress ☐ Photos taken ☐ Approved

Upload Checklist — For Each Photo

Complete every step in order once the best shot has been selected and the final filename assigned.

- ☐ Photo taken — wide AND tight shot captured for this slot
- ☐ Best shot selected from editing folder
- ☐ File renamed to exact name from table (e.g., image-04.jpg)
- ☐ Compressed to under 300 KB using Squoosh.app
- ☐ Uploaded to public_html/assets/ via cPanel File Manager or FTP
- ☐ HTML page updated — placeholder div replaced with an img tag
- ☐ "■ Photo Coming" tag removed from that card in the HTML
- ☐ Page viewed in browser to confirm image displays correctly
- ☐ GitHub repo updated — new image added to assets/ folder, HTML committed
