

ANCHORAGE MAKERSPACE

Website Photography — Shot List

This document is the master reference for all website photo placeholders. For each shot, capture a **wide establishing image** and a **tight detail image** — this gives the photo editor options. File naming is pre-assigned; use the exact filename listed so the HTML update is a one-line change per card.

Note: If your camera supports RAW format, please shoot RAW — this gives William M. Lucid the option to edit photos before web export if needed. JPEG is acceptable if RAW is not available.

SHOOTING REQUIREMENTS

- Shoot RAW if your camera supports it — preferred but not required.
- JPEG is fine if RAW is unavailable; shoot Large/Fine quality at minimum.
- Shoot wide AND tight for every slot — gives more framing and cropping options.
- Keep original camera filenames — do not rename files before handoff.
- Final web-ready JPEGs (image-01.jpg, image-02.jpg, etc.) will be named and compressed before upload.

SECTION 1 — HOME PAGE HERO STRIP (index.html)

Three stacked images on the right side of the home page hero. Vertical orientation preferred (portrait crop) — each slot is tall and narrow. Shoot landscape and crop, or shoot portrait. 3:4 ratio ideal.

Filename	Subject	Location	Wide Shot — What to Capture	Tight Shot	Notes
image-01.jpg	Woodshop	index.html — Hero strip, top slot	Wide view: table saw center-frame, tools visible on pegboard behind	Tighten on blade or miter fence detail	Shoot from doorway height; let shop depth show
image-02.jpg	Laser Cutter	index.html — Hero strip, middle slot	Laser cutter lid open showing bed; ideally with a piece mid-cut (smoke/glow)	Close-up of cut pattern on material on the bed	If shooting mid-cut, use 1/125 s — movement is slow enough
image-03.jpg	3D Printing	index.html — Hero strip, bottom slot	Row of CR-10 MAX printers running, spools visible	Single printer nozzle and first layers of a print	Shoot when at least two printers are actively printing

SECTION 2 — THE SHOP PAGE CARDS (shop.html)

Nine shop area cards, each currently showing a placeholder. Each card displays at 4:3 landscape ratio on the page. Shoot wide first, tight second. If a maker is present and willing, include them — action beats empty equipment.

Filename	Subject	Card	Wide Shot — What to Capture	Tight Shot	Notes
image-04.jpg	Woodshop	shop.html — Woodshop card	Wide: table saw, miter saw, and router table all in frame	Table saw blade and fence from operator position	Clean sawdust off surfaces before shooting

Filename	Subject	Card	Wide Shot — What to Capture	Tight Shot	Notes
image-05.jpg	3D Printing	shop.html — 3D Printing card	All CR-10 MAX printers in a line, all running if possible	Prusa i3 MK3 nozzle, fresh print, filament spool in background	Morning light is good — machines warm up faster
image-06.jpg	Laser Cutter	shop.html — Laser Cutter card	100W laser cutter full machine, lid closed, control panel lit	Finished cut piece on bed with material still in place	Green indicator lights photograph well against dark interior
image-07.jpg	CNC Router	shop.html — CNC Router card	7' x 14' MultiCam CNC — full bed visible from one end	Spindle/bit close-up or finished routed panel on bed	Largest machine in the shop; shoot from elevated angle if possible
image-08.jpg	Welding	shop.html — Welding card	Welding area: machine, helmet, gloves, workpiece on table	MIG torch tip and wire detail against dark background	No active arc — safety first; sparks on table are fine as a detail
image-09.jpg	Textiles & Sewing	shop.html — Textiles card	Sewing machines lined up, fabric and notions on table	Machine foot and needle close-up mid-stitch	Colorful fabric makes these photos pop — choose wisely
image-10.jpg	Electronics & Robotics	shop.html — Electronics card	Bench: oscilloscope, soldering station, components, Arduino boards	Soldering iron tip and solder joint on a PCB	Turn on the oscilloscope — the waveform display reads well
image-11.jpg	Large Format Print	shop.html — Large Format Print card	Wide-format printer in operation or vinyl cutter mid-cut	Freshly cut vinyl lettering on backing sheet	Capture output coming out of the machine if possible
image-12.jpg	Open Studio	shop.html — Open Studio card	WIDE — full event space showing tables, open floor, community feel	Corner detail: maker at a table working on a project	Ideal: Monday Open House with 4-6 people visible — shows community

SECTION 3 — FUTURE / RESERVED SLOTS

These filenames are reserved for pages not yet fully built out. Continue numbering from image-16.jpg for any additional placeholders added later.

Filename	Subject	Page	Wide Shot	Tight Shot	Notes
image-13.jpg	Blog / Events	blog.html or events.html	Workshop in progress — instructor at front, participants at benches	—	Capture a real class or event if scheduling allows
image-14.jpg	Blog / Events	blog.html or events.html	Finished project held up by maker — proud moment	—	Great for blog post headers
image-15.jpg	Visit / Exterior	visit.html	Exterior of 1406 W 33rd Ave Unit F — building entrance, signage	AMS sign or door detail	Shoot on an overcast day for even light on the facade

UPLOAD CHECKLIST — FOR EACH PHOTO

■	Photo taken — wide AND tight shot captured for this slot
■	File renamed to exact name from table (e.g., image-04.jpg)
■	Compressed to under 300 KB using Squoosh.app
■	Uploaded to public_html/assets/ via cPanel File Manager or FTP
■	HTML page updated — placeholder div replaced with an img tag
■	"■ Photo Coming" tag removed from that card in the HTML
■	Page viewed in browser to confirm image displays correctly
■	GitHub repo updated — new image added to assets/ folder, HTML committed
